
Orchestrator locks one invariant + checker suite
+ applicable ISAs + budget
assigned target
Generator agent
seed for the locked invariant only
seed only
Deterministic spine
routing → build → coverage → static / dynamic checker
→ four-state verdict + evidence
verdict
FAIL + deterministic evidence?
yes
PASS / NA / ERROR
(Error retained as diagnostic)
append deterministic state
next round
Minimizer + C-Reduce
reduce → rebuild → same-checker revalidate
Feedback agent
write coverage/verdict guidance → next round
fixed point + same-checker FAIL
persist
guidance
reduction / recheck
Revalidated minimized PoC
→ human review
Continue locked target; then next target
Versioned blackboard
append target, seeds, coverage, verdict/evidence,
guidance, reduction, and revalidation
